

## DELETEF tablename[fieldnumber, count]

The syntax above deletes a specified number of columns starting from a selected column. If the column number is greater than the utmost column number then nothing happens.

- **tablename:** The table name with full path.
- **fieldnumber:** The number of the column to start the deletion from.
- **count:** The number of columns to delete.

### Pactical example

Let's say we have this table:

TABLE01	0	1	2	3
0	a	3	record	20:01:10
1	5	z	2016.04.10.	record
2	9	8	record	2020.06.01.
3	2016.06.22.	2016.06.02.	15:25:45	record
4	10:20:45		h	2016.06.22. 10.20.45
5	2016.06.22. 10.20.45	4	2016.06.22. 10.20.45	5

### Command:

```
DELETEF table01[1, 2]
```

### Output:

```
DELETEFIELD :: TABLE01[1, 2]
```

TABLE01	0	1
0	a	20:01:10
1	5	record
2	9	2020.06.01.
3	2016.06.22.	record
4	10:20:45	2016.06.22. 10.20.45
5	2016.06.22. 10.20.45	5
